SUGUZ (FEM)

Perfectly balanced at 50% Indica and 50% Sativa, SUGUZ adapts effortlessly to all cultivation environments. Indoors, the plant develops an intense stretch in the first two weeks of flowering, before producing compact buds drenched in trichomes. Flowering completes in just 9 weeks, while outdoor growers can expect harvests around mid-October, with yields reaching up to 600–700 g/m².

The aromas are an irresistible blend of fruity sweetness and creamy undertones, inherited from its distinguished parents. This makes SUGUZ a pleasure for flower lovers and an ideal strain for resin extractions, producing flavorful and potent concentrates.

With its eye-catching frost, abundant yields, and mouthwatering flavor, SUGUZ promises to become a must-have in any grower's garden and a flagship strain for R-Kiem Seeds' future.

KEY CHARACTERISTICS

GENETICS: Platinum ZOG x Ice Cream Cake

TYPE: 50% Indica / 50% Sativa

FLOWERING: 9 weeks indoors

YIELD: 600–700 g/m²

OUTDOOR HARVEST: Mid-October

ABOUT R-KIEM SEEDS

R-Kiem Seeds is a cooperative established in 1998, born from the collaboration between national and international growers and geneticists.

Since its foundation, the company's primary goal has been the preservation of valuable genetics through the breeding and development of new hybrids and polyhybrids. This ongoing effort has allowed R-Kiem Seeds to maintain the essence and integrity of its original strains.

The maintenance and enhancement of the company's genetics are based on results obtained from 100% organic cultivation. All seeds are hand-harvested to ensure the highest quality selection and are stored under strict temperature and humidity control for optimal preservation.

CANNABIS

What It Is and What to Look Out For

POISONING

As cannabis legalization spreads across the United States, one consequence has quietly emerged in emergency rooms and poison control centers: a sharp rise in cannabis-related poisonings.

Once considered rare, these incidents are now being reported with growing frequency, particularly among children who mistake edibles for candy and adults unprepared for the potency of modern products.

BY PAUL JAMES

WEEK 14-15 VEG

A few more weeks to go before the flower!

WEEK 16 VEG

She's beginning to fill in the screen now—very healthy plants. She is already showing stamens, and she is definitely female! A couple more weeks, and I'll flip to flower.

WEEK 17 VEG

Okay, one more week of vegetables to get a bit more spread before switching to flowers. We're almost there!

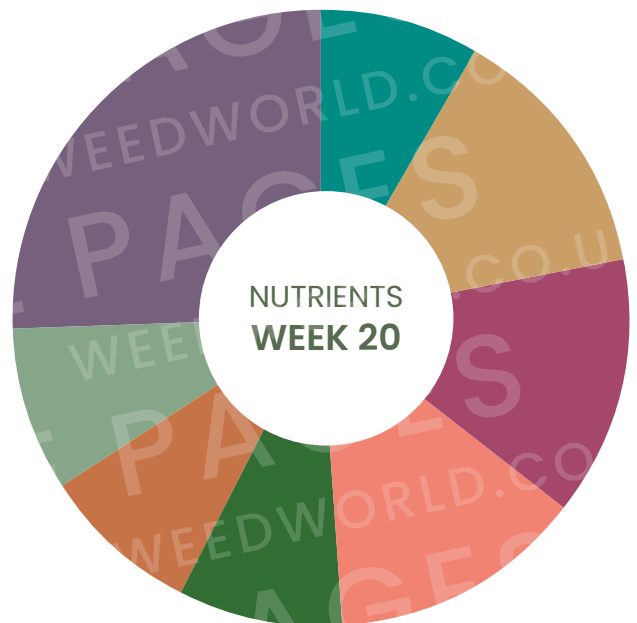

WEEK 18 VEG

This is the final week of vegetables. I flipped to the flower right after taking some pictures. I'll do a bit of defol in the coming weeks!

WEEK 19 FLO

First week of flowers complete! The stretch has started, and things are good!
